This was especially aimed at the public to raise awareness of cancer.

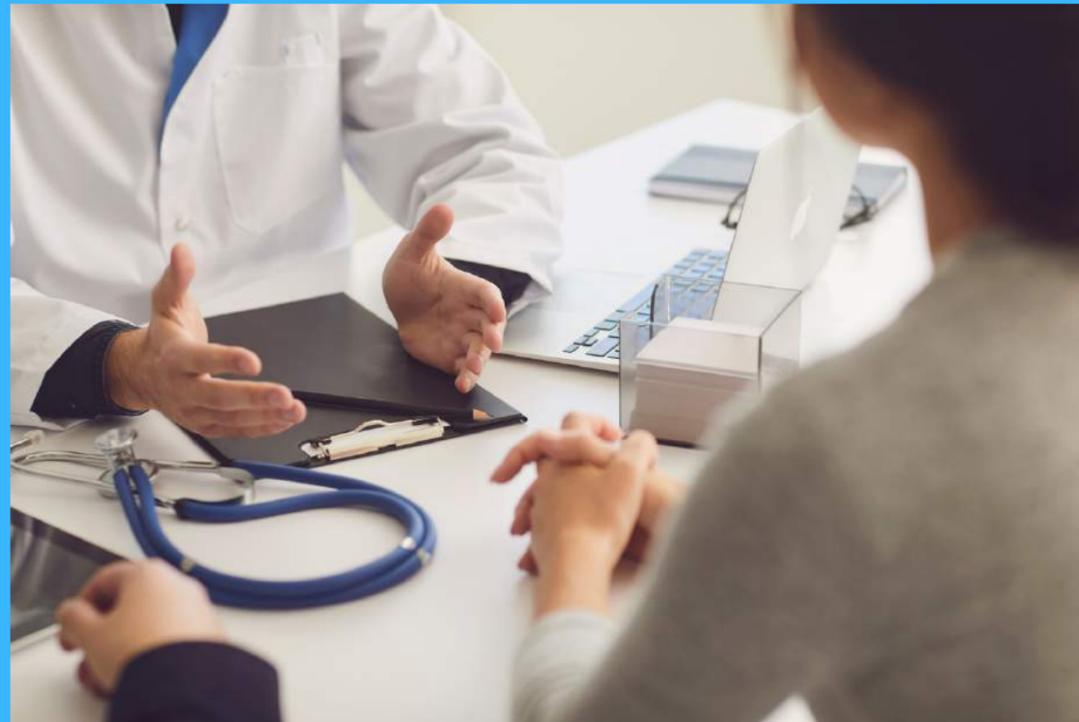

There are many risk factors for cancer.

CANCER CAN AFFECT ANYONE.

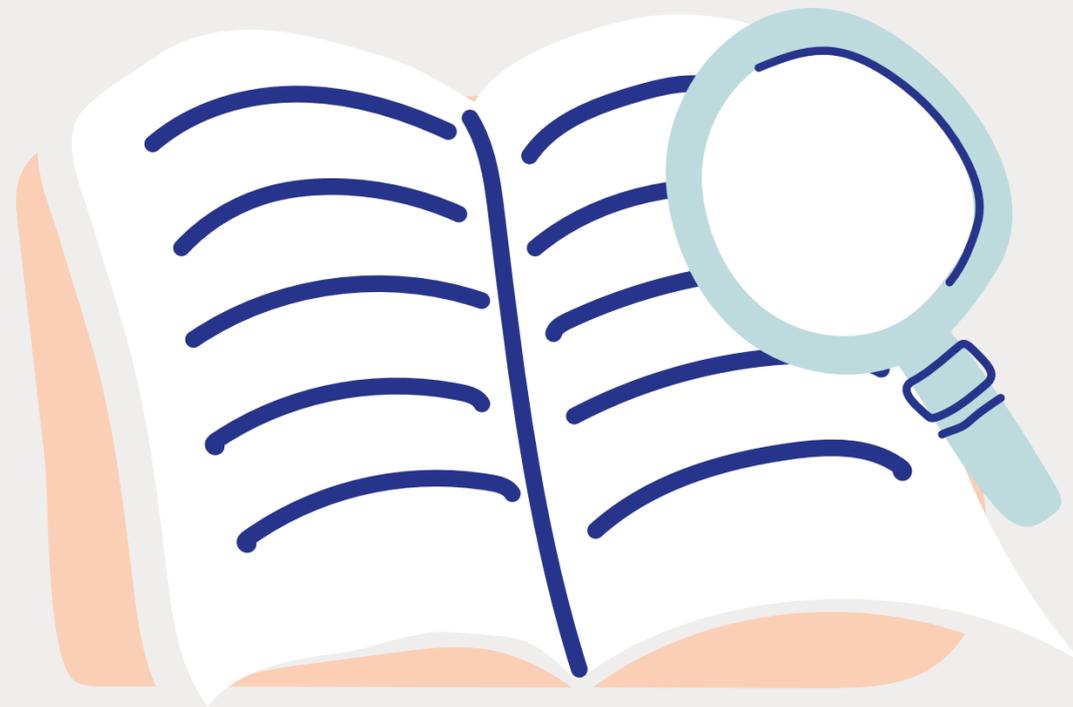

By understanding what cancer is, can help make us more aware of what signs and symptoms to look out for to notify the doctor.

This can lead to doing the necessary procedures to rule out cancer or detect cancer to be treated.

The role of research is important, as more progress is being made, this helps to increase our understanding of cancer and lead to improvement and new discoveries on diagnosing or detecting cancer and treatments.

***Supporting cancer research charities are VITAL
to help research move forward!***
